Social Housing Building Harnesses Solar Revenues for a Bright Future

It is with great excitement that Solar Tech Northern Lights Canada Inc. announces the completion of the first fully installed solar array on a social housing building in the Region of Peel.

Commissioned in November of 2011, Solar Tech Northern Lights installed a 10kW three phase system at 3023 Parkerhill Rd in Mississauga Ontario. This building is owned and operated by Pathway Non-Profit Community Housing Development Inc. of Peel.

The project was entirely funded through a government special purpose grant and closely coordinated through the Region of Peel. The building was awarded a twenty year OPA microFIT contract and all revenue generated will help to offset the impact of rising costs to run the building.

The project represents three levels of government collaborating together for the mutual benefit of this social housing building.

Solar Tech Northern Lights Canada Inc. is an Ontario solar developer and EPC contractor focused on unique and community rewarding projects. The company is also currently developing the first known 250kW solar canopy located on a four level parking garage in the Greater Toronto Area.

Our in-house staff of designers, engineers and installers can assist with the execution of any sized projects.
