

SunRise Power welcomes Quick Mount PV to production

PETERBOROUGH June 15, 2011 - Sunrise Power Corp. will open its doors Friday June 17 at 11 a.m. to cut the ribbon on a new production line following its selection by Quick Mount PV in California to manufacture its composite roof mounts and other products for the Ontario FIT and Canadian Markets.

“The first pieces - composite mounts - came off the line May 4, and we are very pleased to be offering a made in Ontario product to consumers,” says **Paul Pauzé, SunRise Power President**. “This is a terrific example of how the solar industry is helping to create jobs under the Green Energy Act. Our facility and supply chain have added more than 50 new jobs to Ontario.”

This product is an addition to SunRise Power’s manufacturing portfolio which includes the full line of Solectria Inverters, SolarDock ballast racking systems, the Quickmount PV composite roof mount flashings, MAG Tracker (Manually Adjustable Ground-mount) and its own patent-pending IWM flushmount racking (Integrated Wire Management) systems.

In addition to high quality, industry-leading products, SunRise Power is a provider of SolarVu Quote, an online high resolution solar rooftop estimation tool which simplifies site assessment, system sizing and design, and quoting process.

Quick Mount PV is one of the best-selling roof mounts in the market offering fast and easy universally code-compliant watertight mounts for composition roofs. The patented Composition Roof Mount is backed by solid engineering, certification by the ICC-ES, and nearly a million leak free mounts installed.

The Composition Roof Mount system removes the need to trim shingles. Installers drill one pilot hole into the rafter, backfill it with the appropriate sealant, slide the Quick Mount flashing beneath the felt in the course above, and bolt it closed. All the hardware needed is included with every Quick Mount.
