

TORONTO – March 28, 2017 – Today, PowerHub has released Lithium, the third version of its cloud-based asset management software. This version marks a significant leap forward for PowerHub and will help keep them in sync with the growing needs of the renewable energy industry.

"We are very excited about this new release which makes us the most flexible product on the market today. Not only are we offering more functionality, customers will now be able to fully customize their experience by either selecting from pre-built modules or building their own," explains CEO Etienne Lecompte.

This exciting new release boasts new and advanced features such as the ability to pick custom modules, advanced automation, a robust suite of reporting and invoicing tools and more. Working with leading developers, owners and operators over the past six years has taught PowerHub that everyone works differently and that tools such as PowerHub need to be as advanced and flexible as their users.
